WORK EXPERIENCE

AMDOCS (VIA XORIANT)

Software Engineer

Pune, India

July 2025 - Present

- Resolved a production bottleneck where one Kubernetes pod consumed 100% of CSV collector throughput processing an 11.6M-record batch, starving real-time kafka pipelines; implemented workload partitioning to restore uninterrupted flow of 4M+ daily events
- Designed a partition-aware Kafka consumer framework using Java and multithreading, balancing workload distribution and reducing data loss by 20% under high-volume traffic
- Owned RCA and resolution of Sev-1/2 incidents across Kafka Connect, Spark, and Python pipelines — reducing MTTR by ~60% and preventing downstream analytics outages for enterprise customers
- Built an agentic AI debugging workflow (Cursor + MCP) auto-ingesting context from Jira, Confluence, and Git — cutting per-incident context-gathering time by ~40% across the engineering team

IAURO SYSTEMS PVT. LTD

Software Engineer

Bengaluru, India

Nov 2024 - June 2025

- Independently architected, developed, and published a design-to-code Figma plugin that automated React component generation, reducing UI development effort by 90% and achieving 450+ marketplace downloads
- Architected a metadata-driven workflow orchestration platform using Spring Boot that dynamically generated complex sequential and parallel workflows, reducing workflow implementation effort by 90% and powering deployments across 8+ enterprise clients.
- Consolidated order creation, pricing, and multi-level approval workflows (PM → FCO → downstream approvers) from 4 disparate systems into a unified OMS — eliminating manual data entry, integrating real-time pricing lookup, and reducing billing cycle time for a 10+ person finance and operations team
- Mentored and onboarded 5+ engineers across Spring Boot microservices and orchestration platforms, reducing average ramp-up-to-first-PR time by ~30%.

Associate Software Engineer

July 2022 - Nov 2024

- Designed a BFS-based graph visualization engine that transformed uploaded ETL pipelines into one-click visual workflows by generating level-wise DAG representations, automatically mapping dependencies and detecting cyclic relationships while reducing rendering time by 80%.
- Architected a metadata-driven Airflow orchestration platform that enabled drag-and-drop creation of cron-scheduled data pipelines using Python, Kubernetes, and custom operators, dynamically generating DAGs and integrating GenAI-powered query generation and schema discovery, reducing manual workflow development effort by 90%.

Software Intern

Apr 2022 - July 2022

- Engineered reusable AWS S3, Azure Blob Storage file management and Email/SMS notification services adopted as foundational platform components across 8+ enterprise client projects
- Adopted Test Driven Development to write flexible and extensible code using Mockito with test coverage above 90%

PROJECTS

Agent Vault – RAG Based AI Assistant [Python, LangChain, LangGraph, Ollama, ChromaDB, MCP, Streamlit]

[GitHub](#)

- Built a RAG-based AI assistant using LangChain, LLaMA 3.1, and ChromaDB for semantic search over encrypted personal data
- Implemented agentic tool-calling for autonomous query routing across vector memory, encrypted storage, and direct LLM response
- Engineered an MCP server for government document retrieval, served via Streamlit with password-gated encryption

AI Habit Coach Application [Python, FastAPI, GPT-4o, Pydantic, REST APIs]

[GitHub](#)

- Built an LLM-powered habit coaching app using FastAPI, Python, and GitHub Models GPT-4o
- Designed RESTful APIs for habit tracking, AI coaching, progress logs, and weekly summaries with Pydantic JSON responses
- Implemented contextual AI pipelines to generate personalized, insights, habit recommendations, and actionable next steps

TECHNICAL SKILLS

Programming Languages: Java | Python | SQL | JavaScript

Backend Technologies: Spring Boot | Microservices | REST APIs | FastAPI | Django | JPA/Hibernate | OAuth2 | JWT | gRPC

Distributed Systems: Kafka | Spark | Airflow | ScyllaDB | ETL Pipelines

Databases: Oracle DB | MySQL | H2 | MongoDB | ChromaDB | PostgreSQL

Cloud & DevOps: Docker | Kubernetes | OpenShift | Azure AD (Entra ID) | AWS Lambda | Amazon S3 | CI/CD | Git

AI & LLM: LangChain | RAG | MCP | ChromaDB | Vector Databases | Semantic Search | Tool Calling | Agentic AI

Testing & Observability: JUnit | Mockito | pytest | TDD | Grafana | Prometheus

EDUCATION

SHRI SHANKARACHARYA INSTITUTE OF PROFESSIONAL MANAGEMENT & TECHNOLOGY

Raipur, India

B. Tech in Computer Science (CGPA: 8.2/10)

Apr 2018 - July 2022

Related courses: Data Structures & Algorithms, OS, Computer Networks, Distributed Systems, DBMS

Publication: Published research on Enhanced AES Encryption using Dynamic Key Generation for Secure Messaging Systems.
