WORK EXPERIENCE

AMDOCS (VIA XORIANT)

Pune, India

Software Engineer

July 2025 - Present

- Resolved a high-throughput ingestion bottleneck in Spring Boot microservices where a single Kubernetes pod saturated CSV processing during an 11.6M-record batch, restoring uninterrupted flow of 4M+ daily events through partition-aware workload balancing
- Designed a partition-aware Kafka consumer framework in Java with multithreading and load balancing, improving parallel processing efficiency and reducing data loss by 20% under high-volume traffic
- Owned root cause analysis and remediation for Sev-1/Sev-2 incidents across Kafka Connect, Spark, and Python data pipelines, reducing incident recovery time by ~60% and preventing downstream analytics outages
- Built an agentic AI debugging workflow using Cursor and MCP to auto-ingest context from Jira, Confluence, and Git, cutting incident triage time by ~40% across the engineering team

IAURO SYSTEMS PVT. LTD

Pune, India

Software Engineer

Nov 2024 - June 2025

- Architected a metadata-driven workflow orchestration platform in Spring Boot that dynamically generated sequential and parallel workflows, reducing engineering effort to create new workflows by 90% and supporting deployments across 8+ enterprise clients
- Unified order creation, pricing, and multi-level approval workflows from four disparate systems into a single OMS, eliminating manual order processing, enabling real-time pricing lookup, and reducing billing cycle time for a 10+ person finance and operations team
- Independently designed, developed, and published a design-to-code Figma plugin that automated React component generation, reducing UI implementation effort by 90% and reaching 450+ marketplace downloads
- Mentored and onboarded 5+ engineers across Spring Boot microservices and orchestration platforms, reducing average ramp-up time to first PR by ~30%

Associate Software Engineer

July 2022 - Nov 2024

- Architected a metadata-driven Airflow orchestration platform using Python, Kubernetes, and custom operators, enabling drag-and-drop creation of cron-scheduled data pipelines and reducing manual workflow development effort by 90%
- Designed a BFS-based graph visualization engine that converted uploaded ETL pipelines into level-wise DAGs, automatically mapping dependencies, detecting cyclic relationships, and reducing rendering time by 80%

Software Intern

Apr 2022 - July 2022

- Engineered reusable AWS S3, Azure Blob Storage, and Email/SMS notification microservices that became foundational platform components across 8+ enterprise client projects
- Applied test-driven development using Mockito to build flexible and extensible backend code with 90%+ test coverage

PROJECTS

Agent Vault – RAG Based AI Assistant [Python, LangChain, Azure OpenAI GPT-4o, Ollama, ChromaDB, MCP]

[GitHub](#)

- Built a local-first RAG assistant (LangChain, LLaMA 3.1, ChromaDB) with AES-encrypted personal data store and agentic tool-calling — autonomously routing queries across vector memory, encrypted storage, and direct LLM responses via both local Ollama and Azure OpenAI GPT-4o backends
- Engineered an MCP server for secure government document retrieval with semantic search over an encrypted corpus, delivered through a password-gated Streamlit app

OpenObserve – Open Source Contribution [Rust, AWS S3, Multi-bucket Storage, Distributed Infra]

[GitHub](#)

- Fixed a critical multi-bucket storage bug in OpenObserve, a 19.4k+ star open-source observability platform, by isolating instance-level AWS S3 prefixes and eliminating PermissionDenied failures across object operations

TECHNICAL SKILLS

Programming Languages: Java | Python | SQL | JavaScript

Backend Technologies: Spring Boot | Microservices | REST APIs | FastAPI | Django | JPA/Hibernate | OAuth2 | JWT | gRPC

Distributed Systems: Kafka | Spark | Airflow | ScyllaDB | ETL Pipelines

Databases: Oracle DB | MySQL | MongoDB | ChromaDB | PostgreSQL | Cassandra

Cloud & DevOps: Docker | Kubernetes | OpenShift | Azure AD (Entra ID) | AWS Lambda | Amazon S3 | CI/CD | Git

AI & LLM: LangChain | RAG | MCP | ChromaDB | Vector Databases | Azure OpenAI | Tool Calling | Agentic AI

Testing: JUnit | Mockito | pytest | TDD

EDUCATION

SHRI SHANKARACHARYA INSTITUTE OF PROFESSIONAL MANAGEMENT & TECHNOLOGY

Raipur, India

B. Tech in Computer Science (CGPA: 8.2/10)

Apr 2018 - July 2022

Related courses: Data Structures & Algorithms, OS, Computer Networks, Distributed Systems, DBMS

Publication: Published research on Enhanced AES Encryption using Dynamic Key Generation for Secure Messaging Systems
